Copy fees for pre-1981 articles are the same as those shown for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 117

NUMBER 1, OCTOBER 1981

CELL CULTURE

- A Rapid Sampling Method for Measuring Uptake of Small Molecules by Cultured Cell Monolayers *Robert S. Slaughter and Eugene M. Barnes, Jr.* 67

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

- Improved Polyacrylamide Gel Electrophoresis with Different Amino Acids as the Trailing Constituent *Anna M. Parkinson, Allan R. Dorn, Phillip B. Maples, and Robert H. Broyles* 6
- Detection of Cytochrome *f*, A *c*-Class Cytochrome, with Diaminobenzidine in Polyacrylamide Gels *Annette McDonnell and L. Andrew Staehelin* 40
- Detection of Phosphate Esters on Chromatograms: An Improved Reagent *Barry R. Bochner, Dorothy M. Maron, and Bruce N. Ames* 81
- Methods for the Complete Analysis of 5-Fluorouracil Metabolites in Cell Extracts *Alfonso L. Pogolotti, Jr., Patricia A. Nolan, and Daniel V. Santi* 178
- Simultaneous Analysis of Pipecolic Acid with Proline in the Brain by Selected Ion-Monitoring Technique *Yoshiro Okano, Mikiko Kataoka, Takeshi Miyata, Hiroshi Morimoto, Kazuo Takahama, Taizo Hitoshi, Yoshitoshi Kasé, Isamu Matsumoto, and Toshihiro Shinka* 196
- Purity of Tritiated Polycyclic Aromatic Hydrocarbons: Identification of [G-³H]-5,6-dihydrodibenz[*a,h*]anthracene as the Major Radioactive Component in Commercial [G-³H]dibenz[*a,h*]anthracene *Franz Oesch, Ingrid Puff, and Karl L. Platt* 208
- Separation of Aldehydes and Ketones by Chromatography on Dowex-50 in the Ethylenediamine Form *Alan R. Rendina and W. W. Cleland* 213

ENZYMATIC ASSAYS AND ANALYSES

- Preparation, Properties, and Uses of Two Fluorogenic Substrates for the Detection of 5'- (Venom) and 3'- (Spleen) Nucleotide Phosphodiesterases *Dennis M. Hawley, K. C. Tsou, and M. E. Hodes* 18
- A Fluorogenic Method for the Demonstration of Human Serum 5'-Nucleotide Phosphodiesterase Isozymes after Polyacrylamide Gel Electrophoresis *K. W. Lo, S. Aoyagi, and K. C. Tsou* 24
- Use of Methyl Green-DNA Agarose for Detecting Deoxyribonuclease Activity in Polyacrylamide Gels *Andrew C. G. Porter* 28
- Evaluation of the Enzyme Thermistor as a Specific Detector for Chromatographic Procedures *B. Danielsson, L. Buelow, C. R. Lowe, I. Satoh, and K. Mosbach* 84
- Analysis of Mixtures of Primary Chiral Alcohols: A Kinetic Configurational Approach *Stuart Shapiro, James U. Piper, and Eliahu Caspi* 113

Polysaccharide Derivatives as Coats for Nylon Tube Urease	
<i>Francis N. Onyazili and Akintunde C. Onitiri</i>	121
Microdetermination of Galactose and Galactose 1-Phosphate in Dried Blood Spots	
<i>Yushin Fujimura, Sumikazu Ishii, Masahiko Kawamura, and Hiroshi Naruse</i>	187

IMMUNOLOGICAL PROCEDURES

A Highly Sensitive Enzyme-Linked Immunosorbent Assay for Human Immunoglobulin E: Comparison of Microtiter Plate and Disk Methodologies	
<i>Paul Kenneth Goldsmith</i>	53

INORGANIC AND METALLOORGANIC COMPOUNDS

One-Step Molybdate Method for Rapid Determination of Inorganic Phosphate in the Presence of Protein	
<i>Jeanna M. Piper and Stephen J. Lovell</i>	70

INSTRUMENTATION

A Simple Stopped-Flow Temperature-Jump Apparatus	
<i>A. S. Verkman, James A. Dix, and A. A. Pandiscio</i>	164

METABOLITE DETERMINATION

Measurement of Metabolic Intermediates Using a Bichromatic Analyzer	
<i>Alan J. Higgins</i>	219

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

Quantitative Monitoring of Solid-Phase Peptide Synthesis by the Ninhydrin Reaction	
<i>Virender K. Sarin, Stephen B. H. Kent, James P. Tam, and R. B. Merrifield</i>	147

PHYSICAL TECHNIQUES

ESR Study of Intercalation: Quantitative Evaluation of Drug-DNA Binding through Competition with a Spin-Labeled 9-Aminoacridine	
<i>J. L. Bernier, J. P. Henichart, and J. P. Catteau</i>	12

PROTEIN ANALYSES AND REAGENTS

Elimination of Thiol Reagent Interference during Lowry Protein Determination	
<i>James Hughes, Saroj Joshi, and Diane Ascoli</i>	1
<i>N,N</i> -Bis(α -iodoacetyl)-2,2'-dithiobis(ethylamine), a Reversible Crosslinking Reagent for Protein Sulfhydryl Groups	
<i>Richard F. Ludueña, Mary Carmen Roach, Phyllis P. Trcka, and Susan Weintraub</i>	76
Characterization of a New Sulfhydryl Group Reagent: 6,6'-Diselenobis-(3-Nitrobenzoic Acid), A Selenium Analog of Ellman's Reagent	
<i>Narender P. Luthra, R. Bruce Dunlap, and Jerome D. Odom</i>	94
A Method for Quantitation of Protein in the Presence of Percoll	
<i>Masood N. Khan, Rahat J. Khan, and Barry I. Posner</i>	108
Iodination of Proteins, Glycoproteins, and Peptides Using a Solid-Phase Oxidizing Agent, 1,3,4,6-Tetrachloro-3 α ,6 α -diphenyl Glycoluril (Iodogen)	
<i>Philip R. P. Salacinski, Charles McLean, Jane E. C. Sykes, Vicky V. Clement-Jones, and Philip J. Lowry</i>	136

PURIFICATION OF ENZYMES AND PROTEINS

- Purification of Phytochrome by Affi-Gel Blue Chromatography; an Effect of Lumichrome on Purified Phytochrome
Pill-Soon Song, In-Soo Kim, and Tae-Ryong Hahn 32
- An Improved Method for the Preparation of Renaturable Apohemoglobin Chains
Fred K. Friedman, Kenneth Alston, and Alan N. Schechter 103

SPECIAL TECHNIQUES

- Reconstitution of Membranes with Fractions of Triton X-100 Which are Easily Removed
Ronald K. Scheule and Betty Jean Gaffney 61
- The Rate of Nucleic Acid Annealing to Cytological Preparations is Increased in the Presence of Dextran Sulfate
Lynne Lederman, Ernest S. Kawasaki, and Paul Szabo 158
- An Improved Method for Determining the Actin Filament Content of Nonmuscle Cells by the DNase I Inhibition Assay
Joan E. B. Fox, Michael E. Dockter, and David R. Phillips 170

SUBCELLULAR FRACTIONS AND SEPARATION

- A Rapid Method for the Fractionation of Isolated Hepatocytes
A. Lodola, R. J. Newsam, and I. G. Sumner 45

VITAMINS, COENZYMES, AND NUCLEOTIDES

- Detection of *p*-Aminobenzoylpolyl(γ -glutamates) Using Fluorescamine
Robert A. H. Furness and Peter C. Loewen 126
- The Separation and Determination of Thiamin and Its Phosphate Esters in Brain
Toshio Matsuda and Jack R. Cooper 203

NUMBER 2, NOVEMBER 1, 1981

CARBOHYDRATES

- Quantitation of Radiolabeled Mucous Glycoproteins Secreted by Tracheal Explants
Pi-Wan Cheng, James M. Sherman, Thomas F. Boat, and Margaret Bruce 301
- A New Continuous, Monodimensional Electrophoretic System for the Separation and Quantitation of Individual Glycosaminoglycans
Edward H. Schuchman and Robert J. Desnick 419
- Chemical Quantitation of Hemoglobin Glycosylation: Fluorometric Detection of Formaldehyde Released upon Periodate Oxidation of Glycoglobin
Paul M. Gallop, Rudolf Flückiger, Anne Hanneken, Michael M. Mininsohn, and Kenneth H. Gabbay 427

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

- Preparative Liquid Chromatography of 1:1 Adducts Derived from the Reaction of Malondialdehyde with Amino Acids
Donald J. Pietrzyk and John Stodola 245
- A Simple Logarithmic Amplifier for the Photographic Quantitation of DNA in Gel Electrophoresis
W. Hörz, K. V. Oefele, and H. Schwab 266
- Staining for Protease Activity on Polyacrylamide Gels
K. R. Lynn and N. A. Clevette-Radford 280

Silver Stain for Proteins in Polyacrylamide Gels: A Modified Procedure with Enhanced Uniform Sensitivity	<i>James H. Morrissey</i>	307
One-Step Separation of the Subunits of α -Crystallin by Chromatofocusing in 6 M Urea	<i>Hans Bloemendal and Gerrit Groenewoud</i>	327
Method for Rapid Removal of Sodium Dodecyl Sulfate from Polyacrylamide Gels	<i>Hannah M. Phillips</i>	398
Two-Dimensional Gel Electrophoresis of Chicken Skeletal Muscle Proteins with Agarose Gels in the First Dimension	<i>Tamio Hirabayashi</i>	443
A Triton X-100 Acid Urea Electrophoresis System for the Rapid Analysis of Low Specific Activity Globins	<i>Vasek A. Mezl, Gary N. Oakes, Gail W. Wilshire, and John A. Hunt</i>	452

ENZYMATIC ASSAYS AND ANALYSES

A Highly Sensitive Assay for Epoxide Hydrolase Using an Endogenous Epoxide as Substrate: 16 α ,17 α -Epoxyandrost-4-en-3-one	<i>F. Oesch, D. Beermann, A. J. Sparrow, P. Bentley, and U. Vogel-Bindel</i>	223
Hydrophobic Interaction Chromatography Used for Purification of a <i>Treponema</i> Reiter Ribonucleic Acid Antigen Precipitating with Antibodies in Human Syphilitic Sera	<i>C. Sand Petersen, N. Strandberg Pedersen, and N. H. Axelsen</i>	231
Microradioisotopic Assay for Indoleamine <i>N</i> -Methyltransferase and Analysis of Products by Liquid Chromatography	<i>Balvant R. Sitaram, Graeme L. Blackman, William R. McLeod, Seo Pheak Son, and Geoffrey N. Vaughn</i>	250
A Facile Tritium Release Assay for Mammalian L-Dihydroorotate Dehydrogenase	<i>Thomas W. Kensler, David A. Cooney, Hiremagalur N. Jayaram, Clay Schaeffer, and David D. Choie</i>	315
A New Method for the Detection and Assay of α -1,3-Glucanases	<i>Burton L. Lamberts, Lloyd G. Simonson, Ernest D. Pederson, and Robert W. Gaugler</i>	320
A Universal and Rapid Spectrophotometric Assay of CMP-Sialic Acid Hydrolase and Nucleoside-Diphosphosugar Pyrophosphatase Activities and Detection in Polyacrylamide Gels	<i>Willem Van Dijk, Anne-Marie Lasthuis, Piet L. Koppen, and Hans G. Muilerman</i>	346
Differential Assay of Arylsulfatase A and B Activities: A Sensitive Method for Cultured Human Cells	<i>Patricia L. Chang, Nadia E. Rosa, and Ronald G. Davidson</i>	382
Error in Assay due to Time Dependency of Carbon Monoxide Difference Spectrum of Reduced Yeast Cytochrome P-450: Slow Reduction Caused by Triton X-100 Present	<i>Mahmood R. Azari and Alan Wiseman</i>	406

IMMUNOLOGICAL PROCEDURES

Dependence of Diffusion Coefficients and Immunoprecipitating Titers on pH: Human Serum Transferrin, Immunoglobulin A, Human Chorionic Somatomammotropin, and Their Rabbit Antibodies	<i>Renata Zadro, Biserka Pokrić, and Zvonimir Pučar</i>	238
--	---	-----

INORGANIC AND METALLOORGANIC COMPOUNDS

- A Method for the Concentration and for the Colorimetric Determination of Nanomoles of Inorganic Pyrophosphate
Jukka K. Heinonen, Sirpa H. Honkasalo, and Eila I. Kukko 293

INSTRUMENTATION

- A Separation Chamber to Sort Cells, Nuclei, and Chromosomes at Moderate *g* Forces.
 II. Studies on Velocity Sedimentation and Equilibrium Density Centrifugation of Mammalian Cells
A. Tulp, M. W. Kooi, J. B. A. Kipp, M. G. Barnhoorn, and F. Polak 354
- A Versatile Low-Temperature Stopped-Flow Instrument Compatible with Both Rapid and Slow Scanning Spectrometers
Harold E. Van Wart and John Zimmer 410

NUCLEIC ACIDS AND PROTEIN SYNTHESIS

- ³²P-Base Analysis of DNA
M. Vijayaraj Reddy, Ramesh C. Gupta, and Kurt Randerath 271

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

- A High-Performance Liquid Chromatographic Method for the Simultaneous Determination of γ -Carboxyglutamic Acid and Glutamic Acid in Proteins, Bone, and Urine
Manabu Kuwada and Kouichi Katayama 259
- Enzymatic Assays of L-Serine in Biological Material
Roger D. Hurst, Karen Lund, and Robert W. Guynn 339
- Improved Automated Solid-Phase Microsequencing of Peptides Using DABITC
Johann Salnikow, Arnold Lehmann, and Brigitte Wittmann-Liebold 433

PHYSICAL TECHNIQUES

- The Calculation of Partial Specific Volumes of Proteins in 8 M Urea Solution
V. Prakash and Serge N. Timasheff 330
- Differential Interferometry in the Analytical Ultracentrifuge. I. Design, Construction, and Alignment of Differential Interferometer
Toshihiko Kondo and Masaya Kawakami 366
- Differential Interferometry in the Analytical Ultracentrifuge. II. General Applications
Toshihiko Kondo and Masaya Kawakami 374

PROTEIN ANALYSES AND REAGENTS

- A Simple Procedure for Protein Determination by the Lowry Method in Dilute Solutions and in the Presence of Interfering Substances
Itzhack Polacheck and Enrico Cabib 311
- N*-Chloroacetyl-[¹²⁵I]Iodotyramine: An Alkylating Agent with High Specific Activity
David Holowka 390
- Labeling of Pigeon Erythrocyte Membrane Proteins by Low-Level Reductive Methylation
Steven W. Jones and George A. Vidaver 459

PURIFICATION OF ENZYMES AND PROTEINS

- A Single-Step Purification of Rat Pancreatic and Salivary Amylase by Affinity Chromatography** *Peter H. Burrill, Patsy M. Brannon, and Norman Kretchmer* 402

SPECIAL TECHNIQUES

- Syringes Are Unsuitable for Pipetting Submicromolar Solutions of Nucleoside Triphosphates because of Adsorption
-
- Tapas Goswami and Shri V. Pande*
- 336

SUBCELLULAR FRACTIONS AND SEPARATION

- Separation of Right-side-Out-Oriented Subfractions from Purified Thymocyte Plasma Membranes by Affinity Chromatography on Concanavalin A-Sephrose
K. Resch, S. Schneider, and M. Szamel 282

BOOK REVIEWS

- The Electrophysiology of Gland Cells*, by O. H. Peterson

INFORMATION FOR AUTHORS¹

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins when a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in triplicate to *Analytical Biochemistry, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101*. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. Authors should indicate on the title page the appropriate *subject category* for listing in the Table of Contents. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should

¹ An extended Information for Authors was published in the July 15, 1981 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

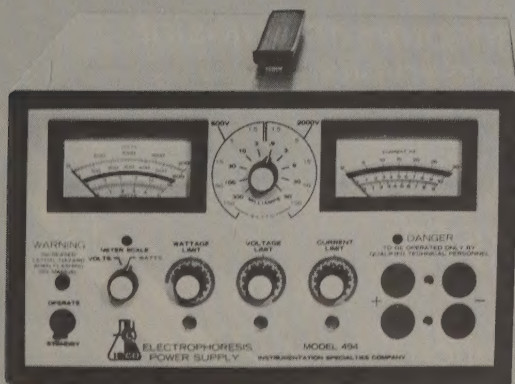

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125**, 255-260.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

Constant power. Faster electrophoresis.

ISCO's constant power can provide you with faster separations and sharper zones, especially for isoelectric focusing and high performance discontinuous buffer techniques. The Model 494 has an automatic crossover circuit that switches control to a different mode whenever a preset power, voltage, or current limit is reached. It also has a unique ground fault detector which often indicates faults before you turn the power up, because it monitors ground capacitance and resistance instead of leakage. A wattmeter

continuously tells you the power output—there's no need to multiply current and voltage readings. And finally, you get 2000V but pay only \$1495.

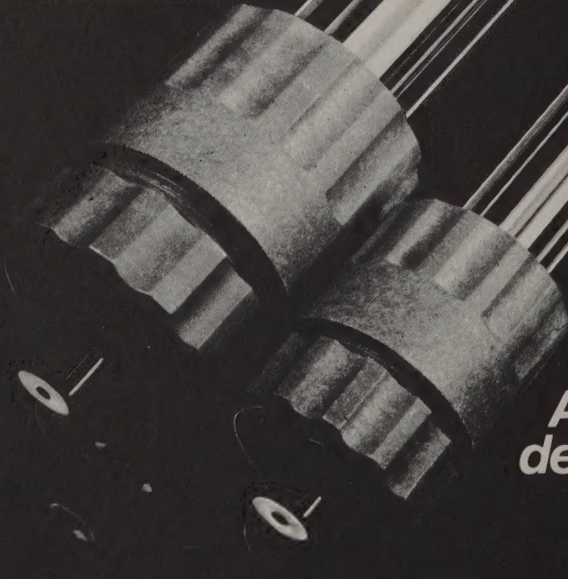

Find out how you can buy an ISCO third generation constant wattage power supply for less than someone else's first try, and get substantially better specifications too. Send for your ISCO catalog today, or phone toll free [800] 228-4250 (continental USA except Nebraska). ISCO, P.O. Box 5347, Lincoln, Nebraska 68505.

Eighth Sigrid Juselius Foundation Symposium, Helsinki, Finland, June 1980

Expression of Eukaryotic Viral and Cellular Genes

edited by Ralf F. Petterson, Leevi Kaariainen, Hans Soderlund and Nils Oker-Blom

August/September 1981, xii + 324pp., £20.40 (UK only) / \$49.00, 0.12.553120.6

Expression of Eukaryotic Viral and Cellular Genes stresses the importance of recombinant DNA techniques and the use of animal viruses as excellent models for studying the structure and expression of genes. Indeed, much of the current knowledge in certain areas of molecular biology comes from experiments carried out with viruses. It contains recent important papers by some of the most prominent molecular biologists in the world.

Molecular Biology: An International Series of Monographs and Textbooks

The Enzymology of Post-Translational Modification of Proteins

Volume 1

edited by Robert B. Freedman and Hilary C. Hawkins

1980, x + 518pp., £40.00 (UK only) / \$96.00, 0.12.266501.5

This volume brings together what is known of the enzymic involvement in post-translational modifications of proteins. It is the first attempt to bring together topics that have been considered separately in the past. Where our knowledge of disparate enzymes is at widely differing stages of advancement, the various chapters reflect this. Each contributor reveals all that is known of the enzymology of particular modifications.

Society for Applied Bacteriology Symposium Series No. 9

Biology and Activities of Yeasts

edited by F. A. Skinner, Susan M. Passmore and R. R. Davenport

1980, xvi + 310pp., £15.80 (UK only) / \$38.00, 0.12.648080.X

This volume brings to the broad spectrum of microbiological research up-to-date information on many aspects of the biology and activities of yeasts. Their industrial and clinical importance, morphology and identification methods are expertly covered. Leading yeast specialists make valuable contributions to the complex topic of yeast taxonomy, the ecology of yeasts, their biochemical and food spoilage activities and their pathogenicity for man.

Volume 16

Essays In Biochemistry

edited by P.N. Campbell and R.D. Marshall

1980, x + 196pp., £6.60 (UK only) / \$16.00, 0.12.158116.0

This well established and highly praised series is intended for senior students, lecturers and research workers in biochemistry. Each essay presents an overall view of one aspect of the subject, providing an ideal introduction to it for anyone who lacks specialist information in the area concerned.

Books in Analytical Chemistry from Academic Press

ANALYTICAL CHEMISTRY OF POLYCYCLIC AROMATIC COMPOUNDS

BY MILTON L. LEE, MILOS NOVOTNY, AND
KEITH D. BARTLE

A comprehensive treatment of the chemical separation, structural identification, and quantitative measurement of the polycyclic aromatic compounds. The authors discuss and critically evaluate various chromatographic and spectroscopic methods. They demonstrate how gas chromatography and high-performance liquid chromatography are both competitive and complementary analytical methods. Ancillary techniques of both are emphasized for the structural elucidation of individual polycyclic compounds in complex mixtures. The merits of spectroscopic methods in both structural work and quantitation are compared, and new directions for these techniques are also discussed.

1981, 462 pp., \$60.00 ISBN: 0-12-440840-0

ORGANIC TRACE ANALYSIS BY LIQUID CHROMATOGRAPHY

BY JAMES F. LAWRENCE

This practical volume applies modern high-performance liquid chromatography (LC) to trace analysis of organic substances in clinical, food, and environmental samples. It covers such equipment requirements of LC as pumping systems, injectors, columns, and detectors. Sample pretreatment, including extraction and cleanup, is discussed in depth, and sample introduction, the various modes of chromatography, and chemical derivatization reactions are thoroughly described. Approaches to routine analysis and automation are also discussed. The book concludes with a chapter that demonstrates the ways in which various parts of a complete LC method are integrated to yield a successful technique.

1981, 284 pp., \$34.00 ISBN: 0-12-439150-8

HANDBOOK OF TOXIC FUNGAL METABOLITES

BY RICHARD J. COLE AND RICHARD H. COX

A comprehensive handbook of the chemical, physical, spectral, and biological data on toxic fungal metabolites and related chemicals that are widely scattered throughout the literature. The authors present, wherever possible, actual copies of UV, IR, ¹H-NMR, ¹³C-NMR, and mass spectra that identify known mycotoxins or related metabolites.

1981, 924 pp., \$79.00 ISBN: 0-12-179760-0

DIGITAL COMPUTERS IN ANALYTICAL CHEMISTRY

PART I: 1950-1969 PART II: 1970-1978

EDITED BY J. B. JUSTICE, JR., AND T. L. ISENHOUR

Volume 3 in the BENCHMARK® PAPERS IN ANALYTICAL CHEMISTRY Series

This two-volume work traces the evolution of computer use in analytical chemistry. Part I surveys the period 1950-1969 and covers the development of large-scale data processing facilities in the United States. It emphasizes work on off-line numerical processing of data. Part II covers the period 1970-1978 and discusses the evolution of mini-computers and the growth of data acquisition.

**Published by Hutchinson Ross Publishing Company,
Stroudsburg, Pennsylvania.
